UMU JALLOH

Cybersecurity Analyst | Detection Engineering & Security Automation
Akron, OH | 330-880-1674 | umujalloh726@gmail.com | LinkedIn | GitHub | Portfolio

CERTIFICATIONS

AWS Certified Solutions Architect Associate | CompTIA Security+ | CompTIA Network+

EXPERIENCE

PCCIP Intern | Ohio Cyber Range Institute (OCRI)
Remote | *Apr 2026 - Aug 2026*

- Served as lead and point of contact for five Ohio local government entities, working with officials ranging from a public librarian and township trustees to a police chief through cybersecurity training.
- Briefed officials on attack scenarios and past incidents at other Ohio government entities, and presented a discussion-based ransomware scenario on how their organization should respond.
- Coordinated onboarding for each entity from a signed MOU to a training launch, and improved the email drafts, meeting agendas, scripts and progress-tracking spreadsheet used along the way.
- Competed on a team of six in the April 2026 OCRI Statewide CTF, placing third at our site, with challenges in network forensics with Wireshark, Linux command-line forensics, threat hunting, cryptography, web exploitation and AI exploitation.

PROJECTS

osTicket AI Triage Agent | Python, FastAPI, Claude API, Splunk, Docker, Slack, PagerDuty

- Built an AI triage agent that classifies each new helpdesk ticket, enriches critical incidents with related Splunk events, and escalates security incidents to a human responder through Slack and PagerDuty.
- Limited Claude to classification only, with a fixed action table in code deciding every note, priority, alert and page, so a manipulated label can only trigger actions the table already allows.
- Threat modeled 8 attack classes, including prompt injection, confused deputy and replay, and closed a gap that would have let an anonymous submitter point the agent's Splunk search at someone else's activity, proving the fix with two identical tickets that returned 0 events for the guest and 20 for the signed-in user.
- Caught the classifier letting a CFO wire fraud test ticket through with no alert, and rewrote its rubric. The latest nine evaluation runs score 35 of 36 labeled tickets with no dangerous misses.
- Built failure handling that pages PagerDuty before any Splunk call, confirms each page reached an incident, and uses a SQLite store to finish interrupted tickets after a crash, backed by 398 verification checks, 228 run in CI.

Splunk SIEM Lab v2: CoinMiner Investigation | Splunk, SPL, MITRE ATT&CK, CyberChef

- Investigated a drive-by cryptomining attack across 1.9M+ events and 107 sourcetypes, tying a 26-minute mining session to one workstation and tracing the root cause to a publicly writable AWS S3 bucket by decoding a base64-encoded postmortem email.
- Turned a 10-second gap between Symantec blocking the miner on one host and mining starting on another into a detection recommendation that treats one host's block as a warning for others that visited the same site.
- Proposed three SPL detection rules rated for false positive risk, and mapped findings to MITRE ATT&CK, NIST CSF, NIST 800-53 and CIS Controls v8.
- Wrote a business impact analysis covering possible PCI DSS and HIPAA exposure, backed by 21 SPL queries and an IOC file.

TECHNICAL SKILLS

SIEM and Detection: Splunk (SPL), detection rule development, threat hunting, IOC analysis
Frameworks: MITRE ATT&CK, NIST CSF, NIST 800-53, CIS Controls v8
Security Tools: Wireshark, Nmap, CyberChef, FTK Imager, Autopsy, Volatility, MemProcFS, Eric Zimmerman's tools
Automation: Python, FastAPI, Claude API, Pydantic, HMAC-SHA256 signing, Docker, Git, GitHub Actions
Systems: Linux (Kali, Ubuntu), Windows, Bash
Training: TryHackMe, 81 rooms completed, working through the SOC Level 1 path

EDUCATION

Stark State College | Associate of Applied Science in Cybersecurity and Computer Forensics
Expected December 2026 | *GPA 4.0/4.0*

- Honors: Phi Theta Kappa Honor Society, President's List (4 semesters)
- Secretary, High Technology Cyber Investigation Association (HTCIA)
- Co-presented an AI security, ethics and privacy workshop for the Stark State and Kent State Student Leadership Academy.
